

VISIONCART OPTICAL

User Manual

How to use the shop

A plain-English guide for customers buying glasses, for the staff who serve them, and for the owner running the business.

No technical knowledge is needed — if you can use a web browser, you can use everything in this book.

Covers the complete shop: online catalogue, virtual try-on, prescriptions, appointments, orders and the back office.

August 2026

Before you start

Who this manual is for

This manual is written for three different people, and you only need to read your own part.

If you are...	Read...
A customer buying glasses	Part I. How to find frames, try them on with your camera, enter your prescription and place an order.
Shop staff or an optician	Part II. How to handle orders, check prescriptions, run the appointment diary and keep the catalogue up to date.
The shop owner or manager	Part III. Staff accounts, the record of who did what, and the handful of things worth checking each week.

You do not need to read the parts that are not yours.

How to read the instructions

Anything you click or type is printed in **bold**. Where a page is shown in a picture, the picture appears directly beneath the step that mentions it.

Three kinds of note appear throughout:

 Tip
Something that will save you time, or a shortcut worth knowing.
 Take care
Something that cannot easily be undone, or a mistake that is expensive to unpick. Read these before acting.
 Good to know
Background — why the shop behaves the way it does. Useful, but you can skip it and still do the job.

A word about your eyes

VisionCart is an optical practice, not a fashion shop that happens to sell glasses. That difference shows up everywhere in this manual:

- A prescription is a *medical* document. The shop treats it as one — it is checked by a qualified optician before any lenses are made.

- Your prescription is never edited once it has been used on an order. A change creates a new version, and the old one stays on file exactly as it was.
- Nothing about your eyes ever appears in a web address, so it cannot leak through your browser history or be seen by anyone looking over your shoulder at the address bar.

 Take care

This manual explains how to *use* the shop. It is not medical advice. If your vision has changed, book a sight test — do not simply reorder your old prescription.

PART I

Buying glasses

CHAPTER 1

What VisionCart does

VisionCart is an online optician. You can browse frames, see how they look on your own face using your camera, enter the prescription your optician gave you, choose your lenses and have the finished glasses delivered.

Figure 1.1: The shop's front page. Everything starts from the menu along the top: **All frames**, **Men**, **Women**, **Kids**, **Virtual try-on** and **Deals**.

1.1 What you can do without an account

Almost everything. You can browse, use the virtual try-on, and place an order as a guest without signing up.

You only need an account if you want to:

- look back at your past orders,
- save delivery addresses so you do not retype them,
- book an appointment at the practice,
- download a copy of everything the shop holds about you.

i Good to know

Even as a guest, the shop opens a *patient file* for you. That is how an optical practice keeps track of your prescriptions so your glasses can be remade if they are damaged, and so a follow-up appointment has your history. It is a legal requirement, not marketing.

CHAPTER 2

Finding frames you like

Click **All frames** in the menu.

Figure 2.1: The catalogue. Filters run down the left-hand side; the frames themselves fill the rest of the page.

2.1 Narrowing things down

The filters on the left let you narrow the list by:

- **Shape** — rectangle, round, oval, aviator, cat-eye and so on.
- **Material** — acetate, metal, titanium, and mixtures.
- **Rim** — full rim, half rim, or rimless.
- **Who it is for** — men's, women's, unisex or children's.
- **Price.**

You can combine as many filters as you like. To start again, click **Clear**.

Tip

If you already wear glasses you are happy with, look inside one of the arms. There is usually a set of numbers like 52–18 140. That is the lens width, the bridge width and the arm length in millimetres — filter for a similar size and the new pair will fit much like the old one.

2.2 Looking at a single frame

Click any frame to open its own page.

Figure 2.2: A frame's page. The colour swatches change the picture; the panel on the right is where you choose lenses and enter your prescription.

Here you can see the different colours it comes in, its measurements, and the price. If the frame is available for virtual try-on there is a **Try it on** button.

CHAPTER 3

Trying frames on with your camera

This is the part most people come for. The shop can show you what a frame looks like on your own face, in real time.

Figure 3.1: The virtual try-on studio.

3.1 How to use it

1. Click **Virtual try-on** in the top menu.
2. Click **Use my camera**. Your browser will ask for permission to use the camera — click **Allow**. Nothing happens until you do.
3. Once your face appears, pick any frame from the strip along the bottom. It will be placed on your face at the right size.
4. Turn your head slowly from side to side to see the frame from different angles.

i Good to know

Your photograph never leaves your computer. All the work of finding your eyes and placing the frame happens inside your own browser. No picture of your face is sent to the shop, stored on our servers, or seen by anybody — unless you deliberately press

Save to my file, in which case you are choosing to keep it with your order.

3.2 If the camera will not start

- **You were not asked for permission.** You may have refused it before. Click the small padlock or camera icon in your browser's address bar and allow the camera for this site.
- **Another program is using the camera.** Close video-call software and try again.
- **You would rather not use the camera at all.** Use **Upload a photo** instead. A clear, front-facing photo in good light works best.

3.3 If the frame sits in the wrong place

The shop finds your pupils automatically, but strong glare, a hat, or a heavy fringe can confuse it. If the frame looks wrong:

1. Click **Adjust eye points**.
2. Click once on the centre of your right pupil, then once on your left.
3. The frame is repositioned around the two points you marked.

3.4 Your pupillary distance (PD)

While the try-on is running, the shop measures the distance between the centres of your pupils. This is your **pupillary distance**, usually written PD, and it is measured in millimetres — most adults are between 54 and 74.

It matters because your lenses have to be positioned so that the optical centre of each lens sits in front of the centre of each pupil. If the PD is wrong, strong lenses can cause eye strain or headaches.

Tip

The shop shows how confident it is in the measurement. If it says the reading is uncertain, hold your head straight, look directly at the camera, and make sure the room is evenly lit. If your optician has already written a PD on your prescription, use theirs — you can type it in by hand.

CHAPTER 4

Your prescription

When you buy prescription lenses, you need the prescription your optician gave you after your last sight test. It will look something like the table below.

	SPH	CYL	AXIS	ADD	PD
Right (OD)	−2.25	−0.75	175	—	31.5
Left (OS)	−2.00	−0.50	10	—	31.5

4.1 What the words mean

Term	In plain English
OD	Your <i>right</i> eye. From the Latin <i>oculus dexter</i> .
OS	Your <i>left</i> eye. From <i>oculus sinister</i> .
SPH (Sphere)	How short-sighted or long-sighted you are. A minus number means you cannot see far away clearly; a plus number means you struggle up close. The bigger the number, the stronger the lens.
CYL (Cylinder)	Corrects astigmatism — an eye shaped slightly more like a rugby ball than a football. Many people have none, and the box is simply blank.
AXIS	Only used when there is a cylinder value. It is an angle between 1 and 180 that tells the lab which way round to grind the correction.
ADD	Extra magnifying power for reading. It appears on prescriptions for bifocals and varifocals.
PD	Pupillary distance — see the previous chapter.

The screenshot shows the VisionCart Optical website header with navigation links: All frames, Men, Women, Kids, Virtual try-on, and Deals. There are 'Sign in' and 'Bag' buttons in the top right. The main content area is titled 'How to read your prescription' and includes the following sections:

- Every optician writes the same numbers, even if the layout differs.**
- OD and OS**
OD is your right eye and OS is your left. They are Latin abbreviations used on every prescription in the world. Some prescriptions write R and L instead.
- SPH — sphere**
The main strength of the lens, in dioptres. A minus number corrects short sight, a plus number corrects long sight. It always moves in steps of 0.25.
- CYL and AXIS — cylinder and axis**
These two go together and correct astigmatism. The cylinder is the strength; the axis, from 1 to 180 degrees, is the angle it sits at. One is meaningless without the other, which is why our form refuses a cylinder with no axis.
- ADD — reading addition**
Extra magnifying power for close work, used for bifocal and progressive lenses. If your prescription has an ADD value, choose a lens type that supports it when you order.
- PD — pupillary distance**
The distance in millimetres between the centres of your pupils. It positions the optical

Figure 4.1: The shop's own prescription guide, at **Help** → **Understanding your prescription**.

4.2 Typing it in

On the frame's page, choose **Prescription lenses** and the boxes appear. Every value is chosen from a drop-down list rather than typed freely.

Good to know

The drop-downs only offer values that step by 0.25 — -2.00 , -2.25 , -2.50 and so on. This is not the shop being awkward: real prescriptions only ever come in quarter-steps, and a typed value like -2.13 is one nobody can make. Choosing from a list means a slipped finger cannot turn into a ruined pair of glasses.

Take care

Check the right and left columns carefully. Swapping them is the single most common mistake, and the resulting glasses will feel wrong in a way that is hard to describe. Read your prescription once more before you continue.

If your prescription has a cylinder value, you must also give the axis. The shop will not let you continue without it — a cylinder with no axis cannot be made.

4.3 Prescriptions that have run out

Prescriptions expire, usually after two years. If yours is out of date, book a sight test. The shop will accept the order, but an optician will check it before anything is made, and they

may contact you.

CHAPTER 5

Choosing lenses

Once your prescription is in, you choose the lenses themselves. There are four decisions, and the price updates as you make each one.

5.1 Lens type

- **Single vision** — one prescription across the whole lens. The usual choice for distance or reading glasses.
- **Bifocal** — distance at the top, reading at the bottom, with a visible line between.
- **Varifocal** (progressive) — distance, middle and reading, blending smoothly with no line.

5.2 Thickness

Stronger prescriptions need thicker lenses. A higher *index* makes the same prescription thinner and lighter, at a higher price.

Index	Best for
1.50	Weak prescriptions, roughly up to ± 2.00 .
1.56	A little thinner; a good general choice.
1.60	Around ± 2.00 to ± 4.00 . Noticeably slimmer.
1.67	Around ± 4.00 to ± 6.00 .
1.74	Very strong prescriptions. The thinnest available.

💡 Tip

If your prescription is stronger than about ± 4.00 and you have chosen a large frame, it is worth paying for a higher index. A big lens with a strong prescription gets thick at the edges, and it shows.

5.3 Coatings

- **Anti-reflective** — cuts glare from headlights and screens. Recommended for almost everyone.
- **Scratch-resistant** — a harder surface.
- **Blue-light filter** — reduces blue light from screens.
- **Photochromic** — darkens in sunlight, clears indoors.

5.4 Tints

For sunglasses: grey, brown or green, in a choice of strengths.

CHAPTER 6

Placing your order

6.1 The bag

Click **Bag** in the top right to see what you have chosen.

Figure 6.1: The bag. Each line shows the frame, the lenses you chose and a summary of the prescription attached to it.

You can change quantities or remove a line here. The prices are worked out fresh by the shop every time you open this page.

6.2 Discount codes

If you have a code, type it into the **Discount code** box and click **Apply**. If it will not work, the shop says exactly why — expired, minimum spend not met, or not valid on those frames — rather than simply refusing.

6.3 Checking out

Click **Checkout** and fill in:

1. **Your contact details** — email address and telephone number. The email address is where your confirmation and updates are sent, so check it carefully.
2. **Delivery address.** If you have an account with saved addresses, choose one from the list.
3. **Delivery method** — the options and costs for your area.
4. **How you would like to pay.**

6.4 Ways to pay

- **Cash on delivery** — pay the courier when the glasses arrive.
- **Bank transfer** — the shop's account details are shown after you order. Send your receipt quoting the order number.
- **Card** — if the shop has card payments switched on.

6.5 What happens next

You will see a confirmation page with your order number, which looks like VC-2026-000123, and receive an email straight away.

Then, behind the scenes:

1. An optician checks your prescription. This is a real person, and it is the step that protects you.
2. Once approved, the order goes to the lab and your lenses are made and fitted to your frame.
3. The finished glasses are dispatched, and you get an email with tracking details.

i Good to know

If the optician finds a problem — a value that looks unlikely, or a prescription that has expired — they will contact you rather than guess. You are told why, and nothing is made until it is sorted out.

CHAPTER 7

Your account

Figure 7.1: The account page, with recent orders and links to everything else.

7.1 Creating one

Click **Sign in** then **Create one**. You need an email address and a password of at least eight characters.

Virtual try-on	Your prescriptions	Measuring your PD

Figure 7.2: Creating an account.

7.2 Your orders

Your recent orders are listed on the account page. Click any of them to see its full detail, including where it has reached.

7.3 Your addresses

Figure 7.3: The address book. The address marked *Default* is the one checkout offers first.

Click **Add an address** to save a new one.

The screenshot shows the 'Add an address' form in the VisionCart Optical user account. The navigation bar is the same as in Figure 7.3. The main heading is 'Add an address'. The form includes the following fields: 'Label (optional)' with a placeholder 'Home, Work...', 'Full name', 'Address', 'Address line 2 (optional)', 'City', 'Province / state', 'Postal code', and 'Phone'. At the bottom of the form, there is a checkbox labeled 'Use this as my default delivery address'. Below the checkbox are two buttons: 'Save address' (blue) and 'Cancel' (white).

Figure 7.4: Adding an address.

- The Label is just for you — “Home”, “Work”, “Mum’s”.
- Ticking Use this as my default makes checkout offer it first.
- **Remove** takes an address out of your book. Your past orders keep their own record of where they were delivered, so nothing is lost from your order history.

7.4 Changing your password

Click **Sign in**, then **Forgotten your password?**. You will be emailed a link that works once and expires after six hours.

Good to know

Changing your password signs you out everywhere else. If you have used a shared or public computer, changing your password is the quickest way to be certain nobody is still signed in as you.

CHAPTER 8

Booking an appointment

If the practice offers sight tests and fittings, you can book online.

Figure 8.1: Your appointments, with anything upcoming at the top.

8.1 Making a booking

1. From your account, click **Appointments**, then **Book an appointment**.
2. Choose a date and what the appointment is for.
3. Click any available time.

VisionCart Optical All frames Men Women Kids **Virtual try-on** Deals Account Bag

GUIDES

How to read a prescription

Measuring your PD

Returns

Privacy & your data

Figure 8.2: Choosing a time. Times already taken are shown crossed out rather than hidden, so you can see how busy a day is.

8.2 Types of appointment

Type	What happens
Eye test	A full sight test with an optometrist.
Fitting	Adjusting new glasses so they sit correctly.
Collection	Picking up finished glasses.
Adjustment	Straightening or tightening an existing pair.
Follow-up	A check after a change in prescription.

8.3 Opening hours

The practice is open **10:00 to 18:00, Monday to Saturday**, and closed on Sundays. Appointments can be booked up to 60 days ahead.

8.4 Cancelling

Click **Cancel** beside the appointment. Please give as much notice as you can — the slot goes straight back into the diary for somebody else.

CHAPTER 9

Your data and your privacy

Because VisionCart is an optical practice, it holds health information about you. You have rights over that information, and the shop gives you buttons rather than a form to fill in.

Figure 9.1: Your data, at **Account** → **Your data**.

9.1 Getting a copy of everything

Click **Download my data (JSON)**. You get a single file containing your account details, addresses, orders, prescriptions and appointments.

9.2 Asking for a change

Figure 9.2: The request form. You do not need to be signed in — the right to ask does not depend on being able to get into your account.

You can ask the shop to:

- **Correct** something that is wrong.
- **Send you a copy** of your data.
- **Restrict** how your data is used.
- **Erase** you from the records.

The shop replies within 30 days, and may check who you are first.

9.3 What “erase” really means

Take care

Erasure removes everything that identifies you — your name, email, telephone number, date of birth and addresses.

It does **not** delete your prescriptions or your past orders. A prescription is a medical record and an order is a financial one, and both have to be kept for a period the law sets. What is kept can no longer be connected to you by name.

Erasure cannot be undone, and it closes your account.

PART II

Running the shop

CHAPTER 10

Signing in to the back office

The back office is where the shop is run. Everything in Part II happens there.

Sunglasses		Privacy & your data

© 2026 VisionCart Optical. Prescription eyewear, fitted properly.

Figure 10.1: The sign-in page — the same one customers use. What you can see afterwards depends on your account.

Go to your shop’s address followed by `/admin`, or sign in normally and you will be taken there.

10.1 The four kinds of account

Role	Can do
Customer	Shop, manage their own account. No access to the back office at all.
Staff	Orders, patients, the diary, the catalogue, media, offers, delivery charges, import and export, data requests.
Optician	Everything Staff can do, <i>plus</i> approving and rejecting prescriptions.
Administrator	Everything, plus shop settings, the audit trail and erasing customer data.

i Good to know

If you cannot see a menu item described in this manual, your account does not have that role. That is deliberate — ask an administrator rather than sharing somebody else's sign-in.

⚠ Take care

Never share an account. Every change is recorded against whoever was signed in, and a shared login makes that record worthless exactly when you need it.

CHAPTER 11

The dashboard

The dashboard is the first thing you see, and it is designed to answer one question: *what needs attention today?*

Figure 11.1: The dashboard. Tiles shaded amber are the ones waiting on somebody.

11.1 The tiles

Tile	Meaning
Orders today	Orders placed since midnight.
Paid, last 30 days	Money actually received.
Awaiting payment	Orders placed but not yet paid for.
In the lab	Orders with the lens laboratory now.
Patient files	How many people the practice has on record.
Live frames	Frames currently on sale.
Prescriptions to check	Waiting for an optician.
Low stock lines	Colourways nearly sold out.

The amber tiles are work. The others are information.

11.2 Prescriptions waiting for an optician

Beneath the tiles is the queue of prescriptions waiting to be checked, oldest first. This is the most important list in the shop — nothing can be made until an optician has been through it.

CHAPTER 12

VC-2026-000002	24/08/2026 13:34	Bilal Khan P-000002	Ravi — Matte Black	Rs.6,800.00	Paid	Paid	Open																																
VC-2026-000001	24/08/2026 13:34	Ayesha Malik P-000001	Ravi — Matte Black	Rs.6,800.00	Paid	In lab	Open																																

Figure 12.1: The order list. Payment and progress are shown separately, because an order can be paid but not yet made, or made but not yet paid.

12.1 Finding an order

Use the search box for an order number, an email address or a telephone number. The three drop-downs narrow the list by progress, payment or lab stage.

12.2 The life of an order

Stage	Meaning
Pending	Placed, not yet paid.
Paid	Payment received.
In lab	With the laboratory, being made.
Ready	Made, waiting to be sent or collected.
Shipped	On its way.
Delivered	Complete.
Cancelled	Stopped. Stock goes back on the shelf.

Stage	Meaning
Refunded	Money returned.

12.3 Taking a payment by hand

For cash on delivery or a bank transfer, open the order and click **Mark as paid**, adding a reference such as the transfer number.

Good to know

Marking an order paid by hand does exactly what an automatic card payment does — same record, same email to the customer. There is no second, weaker path through the shop.

12.4 Sending an order out

Open the order, click **Mark as shipped**, choose the courier and enter the tracking number. The customer is emailed automatically.

12.5 Cancelling an order

Click **Cancel** and give a reason.

Take care

Cancelling returns the frames to stock. If the lenses have already been made to a prescription, they cannot be sold to anybody else — check with the lab before cancelling anything that has passed *In lab*.

Checking prescriptions

Good to know

This chapter is for **opticians**. Other staff can see prescriptions but cannot approve them.

Every prescription typed in by a customer or imported from a spreadsheet arrives as **pending verification**. Nothing is made until an optician has looked at it.

13.1 Working through the queue

From the dashboard, click any patient in **Prescriptions waiting for an optician**, or go to **Patients** and open a file.

Check the values against whatever the customer supplied, then:

- **Verify** — the order moves on to the lab, and the customer is emailed.
- **Send & reject** — give a reason. The customer is emailed the reason, so write it as something they can act on: “the axis is missing for the right eye” rather than “invalid”.

13.2 Why a prescription can never be edited

Take care

Once a prescription has been used on an order it is locked. If something needs to change, you create a *new version*; the old one stays exactly as it was.

This is not awkwardness. If a customer ever reports a problem with their glasses, the practice must be able to show precisely what was made and what it was made from. A record that can be quietly edited afterwards proves nothing.

13.3 Changes the shop will not accept

Two rules are enforced everywhere — the customer’s form, your screen, and spreadsheet imports alike:

- Every value must sit on a 0.25 step.
- A cylinder must have an axis.

Both exist because a lab cannot make anything else.

P-000001	Ayesha Malik	ayesha.malik@example.com	63	1	1 waiting	Open

Figure 14.1: The patient list. Everyone who has ever ordered has a file, including guests.

Each file holds the person’s contact details, every prescription they have had, their orders, appointments and any documents.

14.1 Finding somebody

Search by name, file number, email or telephone. File numbers look like P-000042.

14.2 Adding a prescription

Open the file and click **Add prescription**. This creates a new version — it never overwrites what is there.

Take care

Patient files contain health information. Do not leave one open on a screen the public can see, and never email a screenshot of one.

CHAPTER 15

The appointment diary

Figure 15.1: The diary. Move through the calendar with **Earlier**, **Today** and **Later**, and change how many days are shown.

15.1 During the day

Each booking has three buttons:

- **Seen** — the patient attended.
- **No show** — they did not.
- **Cancel** — the slot goes back into the diary.

15.2 Booking somebody in over the telephone

Use the booking form on the diary page: choose the patient, the date and time, the type and the length.

The diary will not let you double-book. If two bookings would overlap for the same clinician, the second is refused with an explanation.

 Tip

Seen only becomes available once the appointment time has passed. If you cannot click it, check you are not looking at tomorrow.

Figure 16.2: The frame form.

Field	Notes
Name and SKU	The SKU is your own product code and must be unique.
Brand	Created automatically if it is new.
Price	In rupees, as you would write it on a price list.
Shape, material, rim	Used by the shop's filters.
Measurements	Lens width, bridge and arm length in millimetres.
Status	<i>Draft</i> is invisible to customers; <i>Active</i> is on sale; <i>Archived</i> is withdrawn but kept for old orders.

16.2 Colourways

Each frame can have several colours. Each has its own product code, stock level and photographs, so you can sell out of black without affecting tortoiseshell.

Good to know

Prices are typed the way you would say them — 8500 means Rs.8,500. The shop converts and stores them in a way that cannot drift by a rupee no matter how many discounts are applied.

CHAPTER 17

Lens options and prices

Lens options & pricing

These are the steps a customer walks through when choosing lenses. Change a price here and the storefront follows immediately.

What are these glasses for?

NAME	CODE	PRICE	RX LIMITS	DEFAULT	LIVE		
Everyday distance Driving, TV, general wear.	use-everyday	Included	—	✓	✓	Edit	Retire
Reading & close work Books, phone, handwork.	use-reading	Included	—		✓	Edit	Retire
Screens & office Tuned for a monitor at arm's length.	use-screen	Included	—		✓	Edit	Retire

Add an option

Lens type

NAME	CODE	PRICE	RX LIMITS	DEFAULT	LIVE		
Single vision One prescription across the whole lens.	type-single	Included	—	✓	✓	Edit	Retire
Bifocal Distance on top, reading below, with a visible line.	type-bifocal	Rs.3,500.00	—		✓	Edit	Retire
Progressive Distance to reading with no line.	type-progressive	Rs.9,500.00	—		✓	Edit	Retire
Office / desk progressive Optimised for screen and desk distance.	type-office	Rs.7,500.00	—		✓	Edit	Retire

Figure 17.1: Lens options, grouped by type, thickness, coating and tint.

Click **Add an option** to create one. Each option has a code, a name, a price and a position in its group. Turning one off hides it from customers immediately but leaves past orders untouched.

CHAPTER 18

Photographs and try-on artwork

Figure 18.1: The media library.

18.1 Uploading

Drag a whole shoot onto the drop area, or click to choose files. Each photograph is:

- turned the right way up automatically,
- reduced to a sensible size,
- converted to a modern format that loads quickly,
- given a thumbnail.

Files upload one at a time, so a single bad file is reported by name while the rest of the shoot goes through.

18.2 Try-on artwork

Artwork for the virtual try-on must be a PNG with a transparent background. Tick Keep transparency before uploading, or the frame will appear with a white box around it.

 Take care

An image attached to a colourway cannot be deleted — the shop refuses, rather than leaving a product page with a broken picture. Detach it first.

CHAPTER 19

Offers and discount codes

Figure 19.1: Promotions.

Click **New deal** to create one.

19.1 Kinds of offer

- **Percentage off** the basket.
- **Fixed amount off**.
- **Free delivery**.
- **Buy one, get one** — the cheaper pair is the free one.

19.2 The settings that matter

Setting	What it does
Code	Leave blank for an offer that applies automatically.

Setting	What it does
Minimum spend	Below this, the offer does not apply — and the customer is told why.
Maximum discount	Caps how much can come off.
Can be combined	Whether it may stack with other offers.
Priority	Which offer wins when several could apply.
Starts / ends	Leave blank to run indefinitely.

⚠ Take care

An offer with no minimum spend, no cap and no end date is how shops lose money. Set at least an end date.

CHAPTER 20

Delivery charges

Back office

Delivery rates

What checkout quotes when no live carrier is configured — and the fallback when one is configured but unreachable, so a carrier outage never blocks a sale.

NAME	COUNTRY	REGION	APPLIES WHEN	PRICE	ETA	CARRIER	LIVE	
International international	AE	—	Free+	Rs.3,500.00	5–10 days	DHL	<button>Live</button>	<button>Edit</button>
Standard delivery standard-delivery	PK	—	Free+	Rs.300.00	3–6 days	TCS	<button>Live</button>	<button>Edit</button>
Express delivery express-delivery	PK	—	Free+	Rs.700.00	1–2 days	LEOPARDS	<button>Live</button>	<button>Edit</button>

Add a delivery rate

Figure 20.1: Delivery rates.

Click **Add a delivery rate** to create one. Each rate has a name the customer sees, the area it applies to, a price and an estimated number of days. Set the price to zero for free delivery.

CHAPTER 21

Spreadsheets: importing and exporting

Back office
admin@visioncart.local · Administrator

Dashboard Orders Patients Diary Frames Lenses Media Promotions Delivery Import Data requests Audit Settings View shop **Sign out**

Import & export

Move catalogue and patient data in and out as spreadsheets. Exports are shaped so you can edit them and import the same file straight back.

Import

The check always runs first. Nothing is written until you press *Import for real*, and the check lists bad rows by the line number you'll see in your spreadsheet.

WHAT ARE YOU IMPORTING?

Frames & stock

CSV FILE

Choose File No file chosen

Up to 5 MB.

Check the file Import for real

Columns

Frames & stock

variant_sku
required — unique per colourway, and the key we match on

frame_name
required

price
required — in major units, e.g. 8500

frame_sku
groups colourways of the same model together

brand
created if it doesn't exist yet

color_name / color_hex
the colourway and its swatch

stock_qty
whole number

Export

Frames & stock

One row per colourway. Edit prices or stock and import it back.

Patients

One row per file, with the most recent prescription summarised.

Prescriptions

Every prescription version, full clinical detail.

Orders

One row per order line, for accounting and lab reconciliation.

Patient and prescription exports contain clinical data. Handle the files accordingly — every download is recorded in the audit log.

Recent imports

No imports yet.

Figure 21.1: Import and export.

21.1 Exporting

Four exports are available — frames and stock, patients, prescriptions and orders. Each downloads as a spreadsheet file you can open in Excel.

! Take care

Patient and prescription exports contain health information. Every download is recorded. Do not email these files or leave them in a shared folder.

21.2 Importing

1. Export the matching file first — it already has the right columns.
2. Edit it in Excel.
3. Choose the file, then click **Check the file**.
4. Read the report. Nothing has been written yet.

5. If it looks right, click **Import for real**.

 Tip

Check the file lists problems by the line number you see in Excel, so you can jump straight to the row and fix it.

21.3 How rows are matched

Frames are matched on the colourway's product code, patients on their file number. A row that matches updates the existing record; a row that does not creates a new one.

 Good to know

A bad row does not stop the good ones. If ten rows are fine and one is wrong, the ten are imported and the one is reported.

CHAPTER 22

Customer data requests

Figure 22.1: The data-request queue, oldest first — there is a legal clock running on each one.

22.1 Working through a request

Open it, confirm who the person is, do what they asked, then set the status to *Completed* and write a note saying what you did and how you confirmed their identity.

Take care

Erasure is permanent and administrator-only. It removes everything identifying the customer across their file, orders and addresses, and closes their account. Prescriptions and order totals are kept, but can no longer be traced to a person.

The shop asks you to type **ERASE** to confirm, and refuses entirely while the customer has an order still on its way — the courier needs somewhere to deliver to.

Figure 24.1: The audit trail. Administrators only.

Every change to a patient record, a price or an order is recorded: who did it, what they did, when, and from which computer.

24.1 What it is for

- Answering “who changed this price?”
- Showing a regulator that patient records are controlled.
- Investigating a mistake without guesswork.

Good to know

The trail deliberately records *that* a prescription was changed, never the values themselves. Clinical detail lives on the patient file, where access is controlled — not in a log that staff browse casually.

CHAPTER 25

Everyday care

A short list of things worth doing regularly.

25.1 Each day

- Clear the **Prescriptions to check** queue. Nothing gets made until you do.
- Look at **Awaiting payment** for orders that have stalled.
- Check the diary for tomorrow.

25.2 Each week

- Review **Low stock lines** and reorder.
- Check the data-request queue — the legal clock does not stop for a busy week.
- Glance at the audit trail for anything unexpected.

25.3 Each month

- Export your orders for your accountant.
- Review which offers are still running.
- Confirm your backups actually exist.

Take care

A database backup on its own is not a backup. Your product photographs live alongside it, not inside it. Restoring one without the other gives you a catalogue of broken pictures. Back up both, and check once in a while that you can actually restore them.

25.4 Is the shop healthy?

Two addresses answer that without needing anyone technical:

- `/health/live` — is the shop switched on?
- `/health/ready` — can it actually take an order?

The second is the one that matters. A shop can be switched on and still be unable to reach its records, and from the outside those look identical.

Glossary

Term	Meaning
ADD	Extra reading power, on bifocal and varifocal prescriptions.
Anti-reflective	A coating that cuts glare from lights and screens.
Astigmatism	An eye shaped slightly more like a rugby ball than a football. Corrected by the cylinder and axis.
Axis	An angle from 1 to 180 telling the lab which way round to grind a cylinder.
Bifocal	Two prescriptions in one lens with a visible line.
Bridge	The part over your nose. Measured in millimetres.
Colourway	One colour of a frame. Each has its own code, stock and pictures.
CYL	Cylinder. The astigmatism correction.
Diopter	The unit lens strength is measured in. Always in steps of 0.25.
Index	How efficiently a lens bends light. Higher means thinner.
OD	Your right eye.
OS	Your left eye.
Patient file	The practice's record of one person.
PD	Pupillary distance — between the centres of your pupils, in millimetres.
Photochromic	Lenses that darken in sunlight.
Single vision	One prescription across the whole lens.
SKU	A product code.
SPH	Sphere. How short- or long-sighted you are.
Varifocal	Distance, middle and reading in one lens, with no line.

CHAPTER B

If something goes wrong

For customers

Problem	Try this
The camera will not start	Allow camera access from the padlock icon in your browser's address bar, and close any video-call software.
The frame sits crookedly	Click Adjust eye points and mark the centre of each pupil.
My discount code is refused	The shop says why. Usually the code has expired or the basket is below the minimum.
I cannot enter my prescription	Values step by 0.25 and a cylinder needs an axis. Check your prescription again.
No confirmation email	Check your spam folder, then contact the shop with your order number.
I have forgotten my password	Forgotten your password? on the sign-in page.

For staff

Problem	Try this
A menu item is missing	Your account does not have that role. Ask an administrator.
"That slot has just been taken"	Somebody booked it while you were typing. Choose another time.
An import failed	Read the line numbers in the report and fix those rows in Excel.
An image will not delete	It is attached to a colourway. Detach it first.
Lenses cannot be marked ready	The prescription has not been approved by an optician yet.
Too many sign-in attempts	Sign-in is limited to protect accounts. Wait five minutes.
